Benson Medical Instruments Celebrates 20 Years

MINNEAPOLIS, MN (August 22, 2013) – Benson Medical Instruments Co. celebrated its 20th anniversary in January of this year. The genesis of the company was when Stephen Benson, a career software programmer, determined that there was an opportunity to develop group-testing audiometric systems for the mobile occupational testing market. In the early 90s, just being able to automatically test a group of subjects, transfer the data, and print results showing OSHA analysis immediately following the test was of great benefit to service providers.

Benson teamed up with David Mayou, who had an electrical engineering and sales background, to form the company. From there, the pair realized that the broader field of hearing conservation required a streamlined solution for testing, analyzing, and reporting to ensure regulatory compliance. The key element was to seamlessly integrate the various pieces to make it convenient for the occupational health nurse or other user to complete the work.

“Over the years,” Mayou explains, “the company has grown to over 20 employees, most of them software programmers and engineers. Benson Medical was founded on the idea that we solve customer problems. Innovation is at the heart of all of our products.”

Benson Medical Instruments Co. designs and manufactures audiometers, spirometers, and software to manage hearing conservation and occupational spirometry programs for companies.
