## **Benson Medical Instruments Releases Hearing Conservation Software Update**

MINNEAPOLIS, MN (June 26, 2013) – Benson Medical Instruments has made over fifty updates to the software supporting its flagship product, the CCA-200 *mini* Plus audiometer. In addition to offering support for Windows 8, the latest software version delivers important enhancements to the main display. For example, counts of the number of subjects in any company meeting the specified selection criteria are displayed prominently, column headers have been expanded to display more text, and we now support different text size settings in Windows® operating systems.

“These software changes greatly upgrade the user experience and go a long way toward keeping our flagship product on top of the market,” David Mayou, Benson Medical Instruments’ Sales Manager, states emphatically. “We’re dedicated to continuing to offer the best hearing conservation products available.”

Benson Medical Instruments Co. designs and manufactures audiometers, spirometers, and software to manage hearing conservation and occupational spirometry programs for companies.
