### **Occupational Health Software Adds Logos to Reports**

MINNEAPOLIS, MN (August 3, 2016) — Occupational health professionals can now give spirogram and audiogram reports and patient notification letters a branded, professional look by adding their company's name and logo to the header.

The new logo feature is in the latest Report Builder for the Benson Medical Instruments [CCA-200mini Plus](#) audiometer (<http://bit.ly/2av3Alf>) and [CCS-200 Plus](#) spirometer (<http://bit.ly/2aNE7S7>). This recent release is version 7.5 of the software.

Particularly useful for companies with multiple locations, the logo feature allows occupational health practitioners to provide reports and notification letters for employees of specific divisions or facilities. Owners of mobile or on-site testing services also benefit because they can now create customized audiogram and spirogram reports for each of their client companies. Occupational health clinics will be able to use this feature to extend their branding.

Benson Medical Instruments developed the logo feature to be simple and intuitive to use. Using standard graphic files and software, users can add the company logo and/or letterhead by clipping from a website or document, or by using an existing logo file.

The Report Builder automatically scales the logo to the chosen height and places it at the top of the report. Software users will either print the report or save it in PDF format.

"The Report Builder logo feature was developed in direct response to our customers' requests," states David Mayou, Sales Manager at Benson Medical Instruments. "The logo feature is flexible, and makes it easy for occupational health practitioners to include the company identity and branding elements that are important to their organizations."

Benson Medical Instruments Co. designs and manufactures audiometers, spirometers, and software to manage hearing conservation and occupational spirometry programs for companies.
